CS 2720
Second Meeting Questions

1. Ask if he has thought of any changes he wants made

No changes.

2. Ask about system during night-time

"Assume there is a minimal light source" So it will not be completely dark

3. Show mock-up email and ask thoughts (what to be displayed on email)

Liked email mock-up.
Wants subject of email to be: "Motion Detected" then the flag "Red alert"
Maybe include date and time also so that his inbox doesn't just say "Motion Detected" "Motion Detected" and there is some way of classifying it.

4. Ask about log of events (formatting, stuff included)

Our idea is fine. Go with it

5. Email alerts to one person, or more than one?

Yes more than one.

6. If video footage proof for police or real-time surveillance?

Proof of police. So email when video is uploaded. Does not have to be right away when motion detected.

7. Physical documentation/tech support or a web-based documentation?? or both??

Web based documentation and software download works find. Does not need tech support.
